

Dürr trains customers' employees in using control systems for painting technology.

Trained employees ensure quality

India also has its Dürr training center

Chennai, April 2018 – The Indian automotive market is growing, and with it the demand for qualified staff. Dürr offers its customers targeted training programs for their employees – a valuable contribution to increasing the productivity and quality of production. The training center in Chennai, spread over an area of more than 400 m², offers training in painting technology and is one of seven around the world.

The skilled team of trainers at Dürr India teaches participants about Dürr products and trains them in correct operation and maintenance. Those attending the training sessions gain in-depth knowledge of both well-established and new technologies such as the **EcoRP L033** painting robot and its associated control systems.

In addition, participants learn about different products for paint application and sealing. The training center features equipment such as automated rotary atomizers (**EcoBell2** and **EcoBell3**), color changers (**EcoLCC**) and paint supply systems as the electrical horizontal pump **EcoPump HPE400** as well as dosing pumps and mobile spray guns (**EcoGun**). Training is also available on robot teaching, exhaust-air purification technology, pretreatment, cathodic dip-coating and drying processes.

Dürr also trains its own employees at this center, thus preparing them for their tasks at the customers' site.

Take a look at our video (Multimedia to this article on the right site) for more impressions of our training center in Chennai.

It is not only the control systems that must be properly managed and maintained. Trained employees are fundamental in ensuring a high level of productivity.

Robots are taught to paint car bodies or components such as doors perfectly.

Products from areas including paint application, pretreatment, drying and exhaust-air purification are presented in Dürr India's training center.

The training center in Chennai has a modern and appealing design. A wall panel provides information on the milestones in the company's history.
